

# Introduction to Green Skills, Green Careers and Green Jobs

## Understanding Environmental Sustainability

Looking for a comprehensive overview of environmental sustainability in 2023 (and beyond)?

Our flagship course provides learners with a high-level introduction to key focus areas, including climate change, greenhouse emissions, carbon footprint management, biodiversity, conservation, renewable energy, waste management, and sustainability practices.

### ***This course will allow you to:***

- Develop Foundational Knowledge of Key Concepts
- Explore Interactive Briefs of COP26 and COP27 Outcomes
- Learn the United Nations' Sustainable Development Goals (SDGs)

## Introduction to Green Skills, Green Careers and Green Jobs

The green economy in the United Kingdom is growing, but there is a significant gap between the available 'green skill' positions and the skills readily available in the labour market.

This course aims to change that by making it easier for job seekers (and employment counsellors) to navigate this growing, future-oriented aspect of the domestic economy.

### ***This course will allow you to:***

- Interactively Explore the Emergent Hydrogen Economy
- View In-Demand Green Skills in Different Sectors and Regions
- Develop an Effective, Market-Ready 'Green' CV
